## Carminat Guidage Inform SH1

A: If you want to do that, you need to write a regression test that compares the string it is expected to be against what it actually is (at run time). If you want to do it properly, without writing a test, there are different ways, including using `string.IndexOf()`, but this is already talked about in this post: `String` is different at runtime Please be aware of two things: `Strings` in .NET have a limited capacity, so you should probably limit the number of characters to compare to 10 or 100, depending on how many different character types you have. If you want to compare a string with a particular substring, you can use `string.IndexOf(String)` to find the index of that substring. If you find it, go further to find the end of that substring. For example: `int myIndex = myString.IndexOf("Teck"); int endIndex = myString.IndexOf("kck", myIndex + 3);` this would return 5 (the position of the substring "kck") If the string will always be known at compile time, you can use `string.IndexOf(String, int)`, which would look something like this: `int myIndex = 1; int endIndex = myString.IndexOf(myIndex++);` This will find the position of the second occurrence, when you run the program again, `myIndex` will be 2

the ability of differentiated PC-12 cells to secrete beta-glucocerebrosidase (GCase) activity can be measured by the radio-isotope labeled enzyme method. In this method, the secreted enzyme can be recovered from the culture medium through a combination of ultracentrifugation and TCA precipitation. Comparing the amount of GCase activity in control vs. transfected samples allow an estimate of the percent of transfected cells that have differentiated and are secreting GCase. Novel metabolite(s) formed from azathioprine in supercritical fluid chromatography: application to the determination of CYP3A4 inhibitors. Several metabolites of azathioprine have been identified in plasma, urine and tissue extracts via supercritical fluid chromatography (SFC). These studies have demonstrated that post-administration metabolites may account for the toxicity associated with azathioprine therapy. These studies therefore aimed to character
