Should i get it? How is it in general? Would this be good on a P3? I just bought a TK & I wanna get on other games and stuff cause I heard this is the best one to use for APPEARANCE. Best Snoko vs Snoko comparison. Should I rent or buy? APPEARANCE wise on ship vs slave 1 with 300 strength vs 2 with 150 strength. this is a comparison of the snoko vs tatooine versus canto b in a galaxy far far away (alien bots). I've always been interested in getting a PS4/Switch since they came out and I was like cool I wanna play some games on my tv. I'm interested to know how it works and how to make a good bot. I will be making the PS4 my main and only console. If you had to rate this bot compared to other similar bots on this channel. (m/)aiobot.Tedu.co.il.In the past two years, we have learned of not one but two major, undetected breaches that allowed hackers to get their hands on our Aadhaar numbers and bank account details. The first took place between November and December of 2016. The second took place between February-March this year. In both cases, the hackers used apps that store our unique identification numbers on their servers and that stored those sensitive data on encrypted hard drives meant for use only on their servers. Alarming as the breach is, we can hardly say the worst is over. Let's look at some facts: There are an estimated 1.2 billion Aadhaar numbers in the world, according to the Unique Identification Authority of India. Almost every adult in the country has an Aadhaar number; it is a 12-digit identification number issued by the government to all Indian citizens between the ages of 12 and 65. The biometric-based data-gathering exercise started in 2009. Aadhaar is an imperfect system. The unique identification number can be easily stolen or compromised, and if a number is stolen or compromised, it can be used to do all sorts of things like activate SIM cards, withdraw funds from bank accounts, and even apply for jobs, licenses and scholarships. Opinion | No more Aadhaar or bank account details as ID for Indian citizens There are two reasons why the government may have approved the sweeping surveillance of hundreds of millions of Indian citizens: One, the leaks have been out for so long that the number of people affected is much larger than what the government had thought. Two, those affected have been spread across states so that the government may not have been aware of the extent of its reach. The reason that the government changed the norm to allow residents to give their biometric data is also revealing — if they were really worried about the security of the system, why didn't they change the location where the database resides? Instead, the Aadhaar database was moved to a site in Chandigarh, a capital city of Punjab, in 2013. The same database resides on servers at Data Training & Resource Centre, a private organisation in Manesar, Haryana. Why was the sensitive biometric data stored on servers at a private organisation when the government is known to have funded the entire Aadhaar project? Aadhaar is a Rs. 17,000-crore project (equivalent to Rs. 1.5 lakh
