Mechanism of the slow mode of propan-2-ol removal by rat liver alcohol dehydrogenase. The kinetics of the oxidation of propan-2-ol by rat liver alcohol dehydrogenase have been studied at pH 8.0 in the presence and absence of NADH, and have been found to follow simple Michaelis-Menten behavior. The turnover number of the enzyme for this substrate has been found to be 0.44 s⁻¹, and the equilibrium dissociation constant for the substrate has been found to be 3.5 X 10⁽⁻⁴⁾ M. The kinetic studies indicate that the reaction proceeds through a ternary enzyme-substrate-NADH complex, which exhibits an absorption band at 353 nm. The steady state kinetics of this ternary complex have been examined by a variety of spectrophotometric techniques. It has been found that propan-2-ol has an unusually high affinity for the enzyme; binding is weakly reversible at low propan-2-ol concentrations, but that the complex undergoes a hyperbolic increase in binding at high propan-2-ol concentrations. In addition, the spectral properties of the bound propan-2-ol-enzyme-NADH complex are similar to those of the propan-2-ol-NAD complex, and the spectrophotometric results suggest that the formation of this complex is the first step in the reaction. The steady state kinetics indicate that the formation of the ternary complex results in a 50% increase in the apparent reaction rate, and that this enhancement is accompanied by a decrease in the free energy of activation of the reaction. The spectrophotometric and kinetic results are discussed in relation to other studies of this system.

What's New In?

Markup Assist, a new autocad annotation feature, allows you to add information to your drawings that will be available as smart tags throughout your document. Markup Assist delivers new information to you as a marker appears on screen, allowing you to quickly find the information you need. (video: 3:07 min.) New Sustainability Displays: A new graphical interface to show sustainability features in your drawings including percent of material use, water-to-material use efficiency, CO2 emissions, and energy use. The new interface uses the integration of objects and blocks that will be available in AutoCAD 2023. AutoCAD 2023: AutoCAD 2023 will support the newly approved AutoCAD Specification Document (ADSD) and will provide new capabilities for document management. Included in AutoCAD 2023 is the addition of automatic generation of a label that reflects the information on the block. The History Manager will be updated to support version control for both drawings and blocks. Support for Unicode in Open Database Connectivity (ODBC) 5.3 driver and Report Data Connectivity (RDC) 7.0 driver. Added support for the installation of network drives with drive letters and UNC path names. New release control system includes options for viewing releases, displaying the list of all releases, and displaying the list of releases scheduled for the next release. Autodesk is offering a 30-day free trial for AutoCAD 2023. Visit www.autodesk.com/autocad to get started today. AutoCAD 2023 is being made available as a free upgrade for current customers of AutoCAD 2018 or 2019. Register for our free webinar on Oct. 8 for more information about new AutoCAD 2023 features.
